OBJECTIVE

MORE INFO

I am a people person with an extensive computer background. I would like to work either with a marketing/sales team that would benefit from my technical and design skills or to immerse myself in web design. I follow web privacy and usability issues. I have a strong interest in writing.

My previous experience as a software engineer gives me great insight as I expand into the web design field. Since I believe a good web designer must know how to target the product or service they are designing for, I have begun to get my MBA in Marketing. I also continue to upgrade my development skillset.
